

Services

COMPLETE

Netcentric solution and service offerings are designed within a holistic framework and built to be managed and supported as a complete system.

OPEN

Netcentric solution and service offerings are based on open, industry standard technologies that interoperate with your existing IT investments.

INTEGRATED

Netcentric solution and service offerings are based on the fundamental principle that maximum value from technology is best achieved when it's engineered, tested, and pre-integrated to work together as a single, workload-optimized system.

ENTERPRISE INFRASTRUCTURE

Organizations operating traditional enterprise infrastructure, business processing, and back office applications continue to look for ways to cut costs and consolidate onto fewer servers and storage subsystems safely and securely. For both large and midsize businesses, a significant number of older and less efficient systems constrain their ability to grow and adapt to rapidly changing business conditions.

Oracle Applications, Oracle Fusion Middleware, and Oracle Database all demand balanced computational and I/O performance, reliability, availability, and scalability. Enterprise environments also need dense and capable platforms as they struggle with the growing need to consolidate and virtualize systems ranging from business-critical databases and messaging servers to less critical web, DNS, file and print servers. With most datacenters constrained by space, heat, or power, the challenge of scaling within fixed physical, thermal, and electrical boundaries has become a very real concern.

Fortunately, Netcentric Services is here to help. With comprehensive expertise in Oracle's Database 11g and 10g products, combined with deep knowledge of Oracle Solaris, Enterprise Linux distributions, Virtualization technologies, Oracle Enterprise Manager Ops Center, and Oracle's Sun Server and Storage systems, our Consulting Services Team can help with nearly every facet of enterprise infrastructure within the Oracle technology stack. We ensure the infrastructure interoperates with and extracts maximum value from your existing IT assets, and is capable of rapidly adapting to your evolving and changing business needs at *lower cost, reduced risk, and less complexity.*

Service Offerings

- Hardware Infrastructure Sizing and Capacity Planning for Different Workload Profiles
- Complete Hardware and OS Configuration Specifications for Physical and Virtual Environments
- High Availability and Scalability Database Cluster Architecture and Design
- Business Impact Analysis, Disaster Recovery Assessments, and Solutions Architecture
- Backup, Restore, and Recovery Assessments and Solutions Architecture with Oracle RMAN Integration
- Database Systems Upgrades and Migrations
- Database Architecture Assessments, Build Specifications for both OLTP Data Modeling and OLAP Dimensional Modeling

ORACLE TECHNOLOGY

Oracle Database 11g SE & EE
Oracle Database 11g RAC
Oracle Data Guard & Streams
Oracle Enterprise Manager
Oracle Solaris & Enterprise Linux
Oracle VM x86 & SPARC
Sun Servers & Storage
