

COMPLETE

Netcentric solution and service offerings are designed within a holistic framework and built to be managed and supported as a complete system.

OPEN

Netcentric solution and service offerings are based on open, industry standard technologies that interoperate with your existing IT investments.

INTEGRATED

Netcentric solution and service offerings are based on the fundamental principle that maximum value from technology is best achieved when it's engineered, tested, and pre-integrated to work together as a single, workload-optimized system.

IT DISCOVERY & ASSET MANAGEMENT FOR ORACLE DEPLOYMENTS

Organizations large and small are dealing with cumbersome manual processes for managing, tracking and reporting on software licenses, hardware platforms, support contracts and other IT assets. The information surrounding these assets is commonly dispersed across various groups and separate Excel spreadsheets within IT that require manually developed reports on expenditures for software licenses and the servers on which they're deployed. This inefficient process and use of numerous decentralized tools create a chaotic environment in which to manage an organization's IT assets effectively.

In the Oracle world, this task is often ignored until either the time of license renewal or when Oracle requests an actual license audit. Even in tightly controlled environments, Oracle software licensing is complex and can easily spin out of control as user counts increase, physical and virtual server configurations change, and new Oracle database options are deployed. If your organization already has an IT asset management tool in place, it's likely it does not come close to gathering the data required for an accurate Oracle license assessment (e.g. server model, CPU details, specific Oracle options and/or application usage).

To address these challenges, Netcentric Technology Solutions is offering **iQSonar Oracle Edition**, an agent-less software solution that ensures you're making well informed decisions on Oracle license and support spend and remaining solidly in control of your Oracle software assets. This powerful tool completely automates the discovery, auditing, and reporting of all hardware, OS, virtual machines, and Oracle software licenses, saving you significant time and money. And it's **the only third-party tool to be verified by Oracle's License Management Services (LMS) as having the detail and level of accuracy needed to support an effective Oracle license management process.**

Software Features

- Deploys in minutes and scans thousands of IP-based network devices per hour
- Discovers all Oracle deployments on heterogeneous platforms (Windows, Linux, Solaris, HP/UX, AIX, etc.) across your entire enterprise network
- Creates connection strings for all Oracle SIDs automatically
- Delivers a single consolidated view of Oracle licenses; Create reports; Export to formatted XLS
- Automates complex and custom query execution against your Oracle database servers
- Gathers detailed information about hardware profiles (i.e. host name, serial number, processor type, number of processors and cores, virtualization, operating system, etc.)

PLATFORM SUPPORT

- > Oracle Database Editions 8i to 11g
- > Windows NT 4.0, Server, Workstation
- > Windows 2000, Server, Workstation
- > Windows Server 2003 & 2008
- > Windows XP, Vista and 7
- > Solaris 7, 8, 9 and 10
- > HP/UX 11.1, 11.2, 11.3
- > AIX 4.3, 5L (5.0-5.3), 6L (6.1)
- > Linux (OEL, RHEL, SuSE)
